TECHNOLOGIES

IS THE PROTECTION OF YOUR SYSTEM AND DATA A CONCERN FOR YOU?

ARE YOU SEARCHING FOR THE OPTIMAL SOLUTION?

With more than 17 years' experience in this area, and more than 300 million of licenses sold, Softthinks offers a software suite covering system failure diagnosis and repair, system recovery (without data loss), and data protection.

YOUR EXPECTATIONS

Your PC won't boot, or it is totally instable, and you need to get it back working quickly without losing any data.

Your PC is becoming slower and you want the performance that you had when you bought it.

You want to roll back your system to a previous point in time and keep your current data.

A virus or a malware has been installed on your PC and you want to retrieve your system files and contents before they were infected.

You replaced your Hard Disk and want to save your PC environment and content.

You want to ensure that your photos and other important content are backed up regularly and automatically without having to remember any time you import or create new ones.

You are working on critical documents and save several versions per day and want to be able to rollback to any of those versions.

And you want an easy to use, intelligent and transparent solution that will automatically protect your system and content, without any action from you once it has been set up, based on your needs and without intrusive pop-up or reminders.

THE Softthinks Backup and Recovery ANSWER

At Softthinks, we have partnered over the last 17 years with the largest PC manufacturers (HP, Gateway, Dell, Seneca Data) and, based on the expertise acquired, we have enhanced year after year our solution to provide you the best protection possible for your system and data.

An initial setup wizard will guide you to adapt our solution to your needs and will take all actions required to ensure that you can recover your important data and get your PC back up & running.

Once done, your system and data will be protected without requiring any intervention from you. An interface will allow you anyway to adapt this configuration to new needs and verify the activity of our solution.

In the case you will need to repair your system, a wizard will guide you through the process, suggesting the best solution to get your system back to your expected standards.

WHAT'S SBAR?

• A **unique** backup and recovery solution

SBAR protects both your system and your data intelligently and transparently without any intervention from you and without intrusive notifications

• A **patented** repair solution

The patented process used by SBAR adapts the repair process based on the failure encountered. This eliminates most manual intervention except in case of device failure.

• An **easy to use** solution

Just adapt our solution to your needs through our first run wizard and that's all to keep your system and data protected.

• A **Windows universal** solution

Our solution supports all recent Microsoft Windows operating systems from Windows 7 to Windows 10, including Windows Server (2008 to 2016).

SBAR OFFERS THE ABILITY TO:

- **Repair the system** without any data loss
- **Recover the system to its factory state** from a local Recovery Partition and/or from external recovery media
- **Recover the system to any point in time** when a System Backup has been created
- **Recover your data if it is lost or corrupted**
- **Roll back your data to any previous version captured**

Softthinks Backup and Recovery BASIC & PREMIUM EDITIONS FEATURE DESCRIPTION

FEATURE	DESCRIPTION	BASIC EDITION	PREMIUM EDITION
System Backups creation	Back-up the system and contents on demand or/and on schedule in order to recover the system to this point in time		✓
Data Backups creation	Back-up user data selection on demand or/and on schedule		✓
Continuous Data Protection	Monitor in real time the modifications made on files selected by the user and back up those changes		✓
Files versioning	User can easily view all the versions of all the files backed up wherever they are stored (even if the storage location is not present) and restore any of those versions		✓
Shell integration	Allow the user to check which files are protected and to restore them directly from Windows Explorer		✓
Hard disk analysis	Ensure that the system disk has no issue before repairing / restoring the system. Else, offer the possibility to back up as many data as possible to an external drive.		✓
Smart Repair	Detect and repair most common issues preventing a device to start the Operating System (BCD, partition table, boot files, MBR, boot.ini..).		✓
Instant Restore	Replace missing or corrupted system files		✓
User data and settings migration	Back-up the users' data and accounts (including Windows settings: network, wallpaper) before recovering the system, and automatically restore them at the end of the process	✓	✓
Factory Recovery	Recover the system to its Factory state from the local Recovery Partition	✓	✓
Bare metal recovery	Recover the system to its Factory state from an external Factory Recovery Media to a blank disk, when local system recovery is not possible	✓	✓
System Backup Recovery	Recover the system to any point in time when a System Backup has been created		✓
Recovery Media creation	Install the system recovery environment to a USB Flash Drive or a USB Hard Disk. System Backups can also be stored to this media.	✓	✓

COMPATIBILITY:

Windows 7 to Windows 10 & Windows Server 2008 to 2016.
